

# GREEN CRYSTAL COMPREHENSION

Read the passage below and answer the questions to learn more about green crystals.

Farmer Fergus uses a green crystal to energise himself, to help him think and to project a green light into the sky. While this is fictitious in the story there is in fact a green glass crystal that supposedly has magical properties. Known as Moldavite, this gemstone is unique and intriguing as it is believed to have originated from a meteorite impact and the fusion of a meteorite with the Earth's surface.

Around 15 million years ago, a large meteorite struck the Earth in the Bohemian Plateau and the Lusatian Mountains of southern Germany and the Czech Republic. The immense heat and pressure generated from the impact caused the surrounding rocks to melt and vaporize, resulting in the creation of moldavite. Classified as a tektite, which is a type of natural glass formed from meteorite impacts, it is unique in appearance and features and is typically green in colour with a translucent to transparent quality.

Moldavite is highly regarded in metaphysical and spiritual circles as it is believed to possess powerful energy that stimulates spiritual growth, enhances psychic abilities, and accelerate personal evolution. Many people claim that moldavite can induce vivid dreams, increase synchronicities, and facilitate connections with higher realms of consciousness. It is also considered a stone of protection and can aid in clearing energetic blockages.

How did Moldavite form?

---

---

Where can it be found?

---

---

What is a tektite?

---
