

# Falcon Life Cycle

Draw a picture to illustrate each stage of the life cycle of a falcon.

- 1 The female lays a clutch of eggs
- 2 For 6 weeks the tiercel and falcon take it in turns incubating the eggs
- 3 The eyases hatch
- 4 The eyases are fed by their parents
- 5 The eyases grow into chicks with males being larger than females
- 6 The chicks develop into falcons and find their own mate and build their own nest.

Understand that living things grow, change and have offspring similar to themselves.
