

# WASTE SEGREGATION

If you wish to do something more proactive around reducing plastic waste have children collect rubbish around their school or neighbourhood and record the waste collected. This could be as a physical graph of the types of rubbish not making it to the bin or on the graph below. See if students can work out what percentage of the garbage is plastic waste, green waste or could be recycled or composted?

PLASTIC	GREEN	RECYCLABLE	COMPOSTABLE	OTHER

○ Describes and interprets different data sets in context
