

# Animal Descriptions

Match each animal to its description from the back of the book.

Beetles ●

● These marsupials are one of few animals that can climb down a tree head first. They require large hollows to keep their babies safe and to rest during the day.

Skinks ●

● One of the larger microbats in Australia the animals sleep in groups in tree hollows.

Bats ●

● Often laying eggs in small cracks in trees these animals larvae make holes in trees when they eat the wood.

Rosellas ●

● These bright red parrots can live for up to 20 years. They create a nest in a tree hollow to lay their eggs and hatch their young.

Possums ●

● These small lizards search for insects in tree cracks or seek shelter from predators.
