## PANDEMICS VERSUS ANNUAL FLU

Pandemic Flu	Seasonal Flu
Is caused by an influenza virus	Is caused by an influenza virus
Rarely happens (3 times in 100 years)	Occurs annually
Occurs globally simultaneously	Occurs in isolated areas
People have no immunity as the virus is new or novel hence the name novella-coronavirus 19. Now known as Coronavirus, C-19 or The Rona.	People have some immunity from previous exposure to the virus
Health care providers and hospitals are overloaded with patients	Health care providers and hospitals can cope with the number of patients
There is no vaccine	A single dose of vaccine is readily available
Hundreds of thousands of people die from pandemic viruses	Tens of thousands of people die each year from the flu
Entire districts are quarantined and people have to isolate	Sick people are encouraged to stay home
Kills elderly, very young, weak people and relatively healthy people too	Kills elderly, very young and weak people
