

In Young Dark Emu there are accounts of ground that was cleared and up to 6kms of land used for planting and cultivating yams. There was rich loose red soil perfect for growing vegetables until English domestic animals arrived. The cattle and horses trampled the soft soil to hard dirt and the sheep ate indigenous crops to the point of destruction.

Draw a before and after picture in the space below. Before is lush and fertile while the after picture is dry and has stock animals in it. Similar to how it is today.
