

Crocodiles

Kakadu has both freshwater and saltwater crocodiles. Use the information listed below to create a Venn diagram of the differences and similarities between these crocodiles.

Fresh Water Crocodiles

- Lives in tropical north Queensland
- Are also known as Johnstone's Crocodiles
- Are found in fresh water
- Are only found in Australia
- Males grow up to 3m and females 2m
- Mature at 15 years of age
- Eat insects, fish, frogs, turtles, water birds and snakes
- May bite but won't eat people
- Females lay up to 12 eggs at a time
- Breed during the dry season of July and August
- Have long thin snouts, with a straight jawline
- All their teeth are nearly equal in size

Salt Water Crocodiles

- Lives in tropical north Queensland
- Are found outside Australia
- Live in salt water
- Mature at 15 years of age
- Females grow to 4m and males to 7m
- Males can weigh over 1000Kg
- Eat cattle, wallabies, pigs and people.
- Breed during the wet season of November to March
- Females lay up to 50 eggs at a time
- Have powerful broad snouts with an uneven jawline
- Their teeth vary in size with some almost twice the size of others
