

A rhyming couplet poem uses pairs of lines of the same length that rhyme to complete a single thought. There is no limit to the length of the lines you can write. Use the 5 pairs of rhyming couplets below as an example to help you write a rhyming couplet poem about a Yutyrannus.

The Yutyrannus was a Chinese dinosaur Thought to be a 2 legged predator Of the Tyrannosauroidea family It's fossils were found in a Liaoning quarry Living almost 125 million years ago In a land of ice and snow It had feathers but did not fly Instead the feathers kept it warm and dry There is little more that scientist can say But they are learning more every day
